A Description: catalyzes the hydrolysis of one molecule of urea to carbon dioxide and two casportamily: urease, alpha subunit; urease 62K chain homology cycles, betractrimer; hydrolase; metalloprotein; nickel
7.4550/Domain: urease 62K chain homology vicks.
7.144,136,217,360/Binding site: nickel 2 (His, His, Lys, Asp) #status predicted
7.217,246,272/Binding site: nickel 1 (Lys, His, His) #status predicted
7.217,186,272/Binding site: carbon dioxide (Lys) (covalent) (by urease activase) #status predicter
7.219,320/Active site: His #status predicted

A Solnick J.V., O'Rourke J., Lee A., Tompkins L.S.;

Molecular analysis of urease genes from a newly identified uncultured species of Helicobacter.;

In fect. Immun. 62:1631-1638(1994).

--- CATALTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).

--- CATALTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).

--- CATALTIC Consists of two subunits (alpha and beta).

--- SUBUNIT: Consists of two subunits (alpha and beta).

--- FTW: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (by similarity).

--- FTW: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (by similarity).

--- SIMILARITY: Belongs to the urease family.

--- CAUTION: In Helicobacter the beta subunit is what is known in other bacteria as the alpha subunit.

-!- PTM: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).
-!- MISCELLANBOUS: Oligomerization may protect the enzyme against denaturation in an acidic environment (By similarity).
-!- SIMILARITY: Belongs to the urease family.
-!- CAUTION: In Helicobacter the beta subunit is what is known in other bacteria as the alpha subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -i- CATALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).
-i- COFACTOR: Binds 2 nickel ions per subunit (89 similarity).
-i- SUBUNIT: Heterohexamer of 3 alpha and 3 beta subunits. Four heterohexamers assemble to form a 16 nm spherical complex (8y
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Proton donor (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Optimum pH is 8.0. Active from pH 4.0 to 10.0; SUBUNIT: Heterohexamer of 3 alpha and 3 beta subunits. Four heterohexamers assemble to form a 16 nm spherical complex. PTM: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "The complete genome sequence of the gastric pathogen Helicobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PROTEIN SEQUENCE OF 1-15.

-I- MISCELLANEOUS: Oligomerization may protect the enzyme against denaturation in an acidic environment.
-I- SIMILARITY: Belongs to the urease family.
-I- CAUTION: In Helicobacter the beta subunit is what is known in other bacteria as the alpha subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nickel 2 (By similarity).

Purification and characterization of the urease enzymes of Helicobacter species from humans and animals.";

Infect. Immun. 60:5259-566(199).

-!- CATALYTIC ACTIVITY: Urea + H(2)0 = CO(2) + 2 NH(3).

-!- CATALYTIC ACTIVITY: Urea + H(2)0 = CO(2) + 2 NH(3).

-!- SUBUNIT: Consists of two subunits (alpha and beta).

-!- PTW: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).

-!- SIMILARITY: Belongs to the urease family.

-!- CAUXION: In Helicobacter the beta subunit is what is known in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=94018627; PubMed=8412683;

Gloning, sequencing, and expression of thermophilic Bacillus sp.
strain TB-90 urease gene complex in Bscherichia coli.";
J. Bacteriol. 176;432-442[1994].
GARALYIIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).
COPACTOR: Binds 2 nickel ions per subunit (By similarity).
SUBUNIT: (Alpha, beta, gamma) (3) (By similarity).
SUBUNIT: (Alpha, beta, gamma) (3) (By similarity).
Hym: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EMBL; D14439; BAA03325.1; -; Genomic_DNA.

```
Specifically produced on a cell in a metastatic state compared to a similar, non-metastatic cell, and does not bind to a non-activated alphavbeta 3 integrin receptor. Also described are: a pharmaceutical composition comprising the antibody; treating a disease state in a mammal; a cell line comprising the antibody; treating a disease state; homing propensity to a target tissue; producing an antibody phage population having affinity for a tumor cell target; detecting tumor cells in a mammal by treatment with a cancer therapeutic; inducing or enhancing an immune response to an antigen in a mammal; detecting una cells in a mammal by treatment with cancer therapeutic; inducing or enhancing an immune response to an antigen in a mammal; detecting una cervated cell surface in a mammalian tissue sample; interfering with cells liable to undergo metastasis associated with a disease state; dentifying cells liable to undergo metastasis cassociated with a disease state; an isolated 80-12 or 80-15 polymucleotide comprising a nucleotide sequence that has at least 90% sequence that has at least 90% sequence that has at least 90% sequence that has at least 90% sequence that has at least 90% sequence identity to SEQ ID NO.

1 or 3 given in the specification; an isolated bolypeptide comprising a nucleotide sequence that has at least 90% sequence that has at least 90% sequence of the polymucleotide in which the nucleotide sequence of the polymucleotide in which the nucleotide sequence of the polymucleotide in which the nucleotide sequence of the polymucleotide in a host cell; a host cell comprising the polymucleotide or progeny of the cell; and determining anti-metastatic comprising cancer, leavening neoplastic disease, solid tumor, hematological malignancy, reating neoplastic disease, solid tumor, hematological malignancy, reating neoplastic disease, solid tumor, hematological malignancy uterine leidence that has noner, anterine concertal cancer, benign or malignant preast cancer, uterine concertal cancer, anterine concertal cance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
  .c. o.rv bc-12 or Bc-15 antibody comprises ligand mimetic, which specifically binds to activated alphavbeta3 integrin receptor, useful for treating, e.g. neoplastic disease, solid tumor, leukemia, or benign or malignant breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QKFQGRVTWTTDTSTSTAYMELRSLRSDDTAVYYCARDPRGDDEPYWGQGTLVTVSSGGG 122

                                                                                                                                                                                                                                                                                          The invention relates to a humanized neutral genetically engineering Fab fragment, gene product and application are also disclosed. The Fab recombinant antibody is determined by the specific gene sequence in the hypervariable region of the light-chain and heavy-chain variable regions. The antibody can be used for preventing and treating the diseases associated with HCMV infection. The current sequence represents a HCMV-Fab-6 amino acid sequence.

```
The invention relates to the use of human anti-cytotoxic T lymphocyte antigen-4 (anti-CTLA-4) antibody in the preparation of a medicament for the treatment of cancer such as bone cancer, pancreatic cancer, skin cancer, cutaneous or intraocular malignant melanoma, uterine and ovarian cancer, cancer of the anal region, stomach cancer, breast cancer, testicular cancer, uterine cancer and carcinoma of the fallopian tubes. The present sequence is human A10/A26 antibody light chain germline
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Making humanized antibody for converting antibody, by making chimeric antibodies containing complementarity determining region from non-human antibody and appropriate framework sequences of human antibodies.
                                                                                                                                                                                                              Use of human anti-cytotoxic T lymphocyte antigen-4 antibody in the preparation of medicament for the treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a method of making a humanised antibody, comprising making chimeric antibodies containing a complementarity determining region (CDR) from a non-human antibody and appropriate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                40 WFQORPGOSPRRLIYKVSNRDSGVPDRFSGSGSGTDFTLKISRVEAED 87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human germline light chain variable region gene segment #22.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, light chain variable region, VK, humanised antibody, chimeric antibody, complementarity determining region, CDR,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      173 WFQQRPGQSPRRLIYKVSNRDSGVPDRFSGSGSGTDFTLKISRVEAED

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel method for characterising a viral infection in a host. The method comprises identifying at least one viral based sequence element in a blological sample obtained from the host, determining a homology profile of the viral-based sequence element with at least one endogenous host element and characterising the viral infection based on the homology profile, where the homology profile is indicative of a viral behaviour of the viral infection in the host. The method of the invention demonstrates virucide applications and may be useful for preparing a medicament for detecting and/or treating a viral infection or related condition, such as an autoimmune disease e.g. type is cryoglobulinaemia, or lymphoproliferative disease. The viral infection may be due to HCV (Hepatitis C virus), HIV or a member of a infection may be due to HCV (Hepatitis C virus), HIV or a member of a cornaviridae, plaviviridae, papillomaviridae or Coronaviridae, plaviviridae, papillomaviridae or Coronaviridae virus family. Treatment of the invention may be useful for detecting the presence of a virus in a biological sample or for manufacturing a medicament for treating SARS coronavirus (SARS-COV) and/or Human T-lymphotropic virus (HTV-I) infection. The methods are further useful for developing treatment requests to target genotype-

humanised antibodies with suitable therapeutic properties. The antibody has high affinity and low immunogenicity without need for comparing tramework sequences between non-human and human antibodies. This sequence represents a human light chain variable region gene segment used in the creation of humanised antibodies
framework sequences (I) of human antibodies. (I) is selected by using canonical CDR structure types of non-human antibody in comparison to germline canonical CDR structure types of human antibodies as the basis for selection, for humanisation. The method is useful for making a humanised antibody or a converted antibody. The method is applicable for converting a subject antibody sequence of any subject species to a less immunogenic form suitable for use in an object species. The method is reliable for identifying suitable human framework sequences to support non-human CDR regions and to provide humanised antibodies that retain high antigen binding with low immunogenicity in humans, without the need for direct comparison of framework sequences, without the need for determining critically important amino acid residues in the framework, and without the need for multiple iteration and construction to obtain

Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable positions.

Example 16; Fig 40b; 135pp; English

The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; structure; selecting at least one amino acid to be considered at the variable position(s); analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the

The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position [8], analyzing the interaction of each selected amino acid at each variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The present sequence is an antibody wariable region sequence used to illustrate the invention.
antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical properties of an antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody variable region sequence used to illustrate the invention.
                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Computer optimization of physicochemical properties of antibodies comprises analyzing the interactions of amino acids at variable

Vkappa gene locus antibody amino acid sequence #22.

06-MAY-2004 (first entry)

ADJ80262;

```
The present invention relates to a method for optimizing at least one physico-chemical property of an antibody by a computational screening method. The method comprises: receiving a template antibody structure; selecting at least one variable position belonging to the antibody structure; selecting at least one amino acid to be considered at the variable position with at least part of the remainder of the antibody, including the selected amino acids at other variable positions; and identifying a set of at least one antibody sequence with at least one optimized physico-chemical property. The method is useful for optimizing the physico-chemical property of antibody, especially the stability, solubility, or antigen binding affinity. The optimized antibody may be useful for treating a patient. The present sequence is an antibody way be variable region sequence used to illustrate the invention.

Producing a hybrid antibody or hybrid antibody fragment by operatively linking the selected framework sequences to one or more complementarity determining regions of the initial antibody.

Disclosure; SEQ ID NO 22; 77pp; English.

```
The invention relates to a method of producing a hybrid antibody or hybrid antibody fragment by: (i) providing an initial antibody having expecificity for a target; (ii) determining the sequence of a variable region of the initial antibody; (iii) selecting a first component of the variable region consisting of FR1, FR2, FR3 and FR4; (iv) comparing the sequence of the first component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from a target species; (v) selecting a sequence from an antibody in the database of than the first component, the second component selected from the group selecting a second component, the second component selected from the group consisting of FR1, FR2, FR3 and FR4; (vi) comparing the sequence of the second component to sequences contained in a reference database of the second component to sequences contained in a reference database of antibody sequences or antibody fragment sequences from the target species; (viii) selecting a sequence from the database of antibody than the selected antibody; and (ix) operatively linking the sequences of the initial antibody; and (ix) operatively linking the antibody fragment. The method is useful for producing a hybrid antibody fragment. The method is useful for producing a hybrid antibody or hybrid antibody tragment (claimed). The antibody variable heavy or hybrid antibody fragment can expend the CDRs. This produces antibodies that are highly homologous and exhibit reduced immunogenicity while mathod and sequence of an antibody from the Vkappa gene locus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      173 WFQQRPGQSPRRLIYKVSNRDSGVPDRFSGSGSGTDFTLKISRVEAED 220

recombinant catalytic polypeptides of the invention. These comprise a human antibody light chain operably joined to a heterologous antibody human antibody light chain has a serine protease dyad and endopeptidase activity, and the heavy chain has a predetermined specificity for a target protein. By joining 2 heterologous human antibody chains, one of which supplies the catalytic activity to hydrolyse polypeptides and the chart the binding specificity for a target protein, the invention provides for the construction of a repertoire of proteases with customised protein substrate specificities of potentially unlimited number and thus makes possible the effective treatment and/or prevention of any medical condition attributable to the presence or overexpression of any medical condition attributable to the presence or overexpression of any dentified protein. The invention also provides nucleic acids cnocding the catalytic antibodies (which can be used for gene therapy), host cells, transgenic non-human animals, and methods of cleaving a recombinant catalytic polypeptides with altered enzymatic activity, and a method of altering the enzymatic activity, and a method of altering the enzymatic activity, and a method of altering the enzymatic activity of the recombinant catalytic contents.
A17. This is one of a repertoire of human kappa light chain sequences ADO07310-ADO07349 screened for putative catalytic triads. Several genes encoding such light chains ADO07282-ADO07309 were cloned for use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mutating at least one complementarity determining region of the heavy chain. A serine protease triad was identified in the present sequence, which can be used as the light chain sequence in catalytic polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antibody engineering; antibody; antibody production; gene library; DNA recombination; gene amplification; primer extension; light chain variable region.

Producing polynucleotide encoding human germline antibody V-region for generating full-length antibody germline V-region genes, by obtaining N or J minigene and joining V minigene with J minigene, or joining J minigene with V minigene. Disclosure; Fig 12; 52pp; English.

The present sequence is the light chain variable region of human antibody

Disclosure, Fig 3, 92pp, English.

The present invention relates to producing germline antibody genes by a completely in vitro approach that mimics the natural process of V(D)J crecombination. The antibody genes are completely human and native in the recomplation that with an expension of their sequence, and libraries of such antibody genes can be constructed which represent an unselected population representing the entire antibody crepertoire. The method uses gene amplification to produce a V minigene, and a hybrid primer fapable of hybridizing to a V minigene and either a D or V minigene. The hybrid primer facilitates recombination of a V contingene to a D or J minigene to produce a full length V-region gene. Also disclosed is a library comprising member polymucleotides encoding exogenously rearranged human germline antibody V-region, a D minigene or solution to the 3 minigene in so betained by chemical contingene. The V minigene or the J minigene in so betained by chemical synthesis or by amplification from a germline DNA library. Joining the V minigene with at least two or three oligonucleotide primers. The V minigene is derived from human immunoglobulin heavy chain locus. The V-region also comprises a serine protease triad. The human immunoglobulin heavy chain locus. The V-region also be used as precursors to more high affinity antibodies, and are useful in the generation of efficiently pairing libraries of heavy and light chains. The present sequence is a human germline light chain kappa region peptide

protein sequence on an amino acid string. The method is useful for generating a variant protein, e.g. a variant antibody for a host as compared to a parent protein. The method enables the generation of variant proteins having an intended host string content and reduced immunogenicity. This sequence represents a variable light chain of human antibody protein used in a human germ line comparison of the

Treating cancer in mammal who has undergone stem cell transplantation, comprises administering human anti-cytotoxic T lymphocyte antigen-4 antibody to the mammal.

Disclosure; SEQ ID NO 36; 135pp; English.

The invention relates to a method of treating (M1) cancer in a mammal comprising administration of a human anti-CTLA-4 (cytotoxic T lymphocyte antigen-4) antibody. Also included are: treating cancer in a mammal by administering cancer in a mammal by administering anti-CTLA-4 antibody; and treating cancer in a mammal by administering an effective amount of a human anti-CTLA-4 antibody; and transplantation. The cancer is chosen from breast cancer including metastatic breast cancer, is chosen from breast cancer including cancer, pancreatic cancer, skin cancer, cancer of the head or neck, melanoma including coetaneous or interlobular malignant melanoma, uterine cancer, covarian cancer, resticular cancer, uterine cancer, cancer defined cancer, testicular cancer, uterine cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined cancer, cancer defined c intestine, cancer of the endocrine system, cancer of the thyroid gland, cancer of the parathyroid gland, cancer of the adrenal gland, sarcoma of soft tissue, cancer of the urethyroid gland, cancer of the penis, prostate cancer, chronic acute leukemias including acute myeloid leukemia, chronic myeloid

The method comparises providing an immunoglobulin gene encoding a candidate antibody and comparing it with an immunoglobulin gene from the recipient. Also claimed is a method of excluding an antibody from use in the treatment of a host. Also given are transgenic animals and methods for identifying antibodies or for screening or agents that inhibit the induction of HAHA response; kit for detecting an antibody or assessing the risk of a HAHA response in a patient; and a method of increasing the probability that a HAHA response will be detected in a transgenic mouse. The method further comprises repeating the steps of providing, comparing, and selecting for more than one immunoglobulin gene or for every immunoglobulin gene or for every
leukemia, acute lymphoblastic leukemia, chronic lymphocytic leukemia, solid tumors of childhood, lymphocytic lymphomas, cutaneous T cell lymphoma, cancer of the bladder, cancer of the kidney or ureter, renal cell carcinoma, carcinoma of the ranal pelvis, neoplasm of the central nervous system (CNS), primary CNS lymphoma, tumor anglogenesis, spinal axis tumor, brain stem glioma, pituitary adenoma, Kaposi's sarcoma, epidermoid cancer, squamous cell cancer, T-cell lymphoma, environmentally induced cancers including those induced by asbestos, myeloma, neuroblastoma, and pediatric sarcomas. The present sequence represents human anti-CTLA-4 antibody, Kappa chain protein SEQ ID NO:36.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Selecting an antibody with a reduced risk of inducing a human anti-human antibody response comprises providing an immunoglobulin gene encoding a candidate antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibody therapy; antibody engineering; transgenic animal; drug screening; leukemia; hematological disease; neoplasm; cytostatic; autoimmune disease; immunosuppressive; immune disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           88888888888888
                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                셤
```

```
is a V gene, e.g. a VH (heavy) gene or a VL (light) gene. The methods are useful for selecting an antibody with a reduced risk of inducing HAHA response. The antibody, composition, and method are useful for treating diseases, e.g. leukemia or autoimmune diseases. The present sequence is a human antibody Vkappa protein sequence.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 113,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 45,
